

Temporary closure Hazelwood Pondage

The final report by independent consultants into the integrity of the dam walls has been delivered. The report recommends that to maintain public safety, the temporary closure of the Hazelwood Pondage should continue until early 2019 and then be subject to another review.

To mitigate risk and ensure public safety, the water level will be dropped by a further 1.7 metres. It is anticipated this reduced water level will be reached by February 2019.
